Purpose of creating the game

The issue of language barriers faced by foreign nurses in Singapore stems from the diverse languages used in healthcare. There are various languages spoken by local and international staff, making effective communication crucial, especially during emergencies. The problem lies during these emergencies, where foreign and local nurses may struggle to understand, or be slow to understanding each other quickly. Addressing this language challenge in Singapore's healthcare is crucial to ensure the safety of the patient and a successful response to any medical emergencies.

Needs Statement:

Nurses working in Singapore needs a solution to overcome language barriers and communicate effectively as to ensure a smoother flow of crucial actions during emergencies

When to play:

This game serves as a training tool for nurses and ideally be incorporated into the orientation week and training days. This ensures that nurses stay updated and proficient in proper communication methods and usage of lingos.

The game can be organised as a friendly competition between different wards, with prizes awarded to the winning team

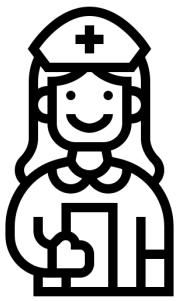
Mission Overview

Greetings medical practitioners we are "InstellarX", a highly classified organization overseeing space exploration. In our recent mission, we acquired specimen "AX-125" from planet [redacted] located at [redacted]. It is important to note that "AX-125" was unconscious upon capture and [redacted]. Vitals of "AX-125" were promptly stabilised following immediate medical attention on Earth. Subsequently, AX-125 is now under close observation in a specialised ward dedicated to its monitoring and care.

Your mission, should you choose to accept, is to take care of "AX-125" and attend to any medical emergencies that may occur. This manual contains all the information you need to provide proper care for the alien. Remember - Don't let the alien die.

Game Roles:

There are 3 main roles to be played



NurseIn-charge(NIC)

(1 player)

The NIC instructs the team on how to provide proper care to the alien and will be the main communication channel to convey information between the doctor and the team. A copy of "NIC Manual"(pg 05 to pg 10) will be issued to the NIC for reference during the game. Note that only the NIC can use this manual.

Nurses

(2-3 players)

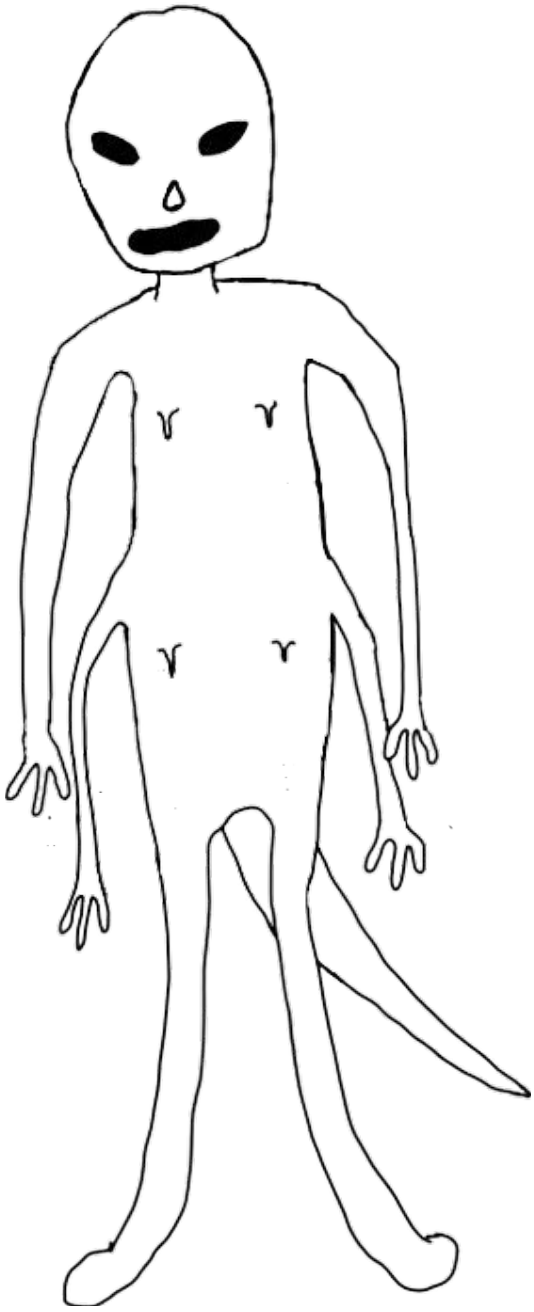
The nurses has to take instructions and work together with the NIC to give the alien the proper care it needs. It is important for the Nurses to use appropriate jargons, lingos proper communication etiquette during the process. Failure to do so, will result in deduction of points.

Doctor / Moderator

(1-2 Trainer)

This role should be taken on by someone who is experienced in the field. The Doctor decides how challenging the task is for the NIC and the team. They also keep an eye out for any mistakes done by the team and is the one deducting points. After the game, the Doctor will conduct debriefing sessions for the NIC and the team about what went well and what could be done better in the future.
A copy of "Dr Manual" is available on page 11 to assist the Doctor with their duties.

How to Play



For NIC and Nurses

The Alien will occasionally encounter medical situations resembling those of humans. You are to **carry out the standard procedures** as you would normally do for humans, but be aware that the steps for treating the alien will differ.

You are to **use nursing lingo/jargons with proper communication etiquette** whenever possible. (Information on the proper communication etiquette and medical abbreviation is available on page 19)

Timer starts only when doctor informs NIC on the current condition of the alien.

Points will be deducted by the moderator if he/she spots any mistakes.

Information on how to treat the alien is available in "NIC Manual". Note that only the NIC has access to it.

You have 5 minutes, work together, stabilise the alien's condition, and most importantly, **dont let the alien die**

For Doctor / Moderator

Your main role is to observe the team and to note down on what the team did well and could be improved. You possess the capability to communicate with the NIC at your discretion, providing updates on the alien's condition according to your preferences. The team has to call you if they want to update the situation of the alien to a doctor. A point deduction checklist is available under "Dr Manual" on page 13 to help you keep track of the scores.

NIC MANUAL

Print pages 05 to 10 for the NIC

Beta Version

WARNING: This manual should only be used by the NIC

Read this manual carefully; You're the nurse in charge. Inside, you'll find everything you need to know to help an alien in case of a medical emergency.

Lead your team to effectively address the needs of the alien.

Identifying Alien Sickness

The game scenarios are inspired by real-life procedures, but adjustments are made for treating an alien, considering the unique circumstances.

- When the alien isn't well, it will display symptoms.
- This page is your guide to understanding the specific sickness the alien could be going through.

Signs of Hypoglycemia:

1. Alien's eye will glow red
2. Alien's Ovario Flux LEFT light is lit
3. All 4 arms will begin to vibrate
4. Alien's stomach will begin to vibrate

Signs of Respiratory Distress:

1. Alien's eyes will glow red
2. Alien's Ovario Flux RIGHT light is lit
3. Alien's TOP 2 arms vibrates
4. Alien's Stomach will vibrate

Signs of Cardiac Arrest:

1. Alien's eyes will glow red
2. Alien's Ovario Flux LEFT light is lit
3. Alien's BOTTOM LEFT arm will vibrate
4. Alien's Stomach will start BEEPING

Alien Anatomy available on pg 10.

Providing Proper Alien Care

The game scenarios are inspired by real-life procedures, but adjustments are made for treating an alien, considering the unique circumstances.

- After identifying the alien's disease, provide the proper care for the alien
- Refer to the following steps for a detailed guide on how to treat the alien.

How to check CBG Level:

- Pump LOWER heart 3 times till it lights up
- Raise the alien's LEFT leg up and hold it till it begins to vibrate
- Prick sole and measure CBG Level

If CBG reading < 3.9

1. Press and hold LIGHTED part of Ovario Flux till light turns OFF
2. Pump TOP heart 3 times until it lights up.
3. Check if above -mentioned signs are corrected.

If CBG reading < 2.8

1. Press and hold UNLIGHTED part of the Ovario Flux until light turns ON
2. When BOTH lights of Ovario Flux are on
3. Wait till BOTTOM heart light turns OFF
4. Hold both lights Ovario flux SIMULTANEOUSLY till both lights are OFF

In case of Respiratory Distress:

1. Place the alien in an upright position.
2. Grab nitrogen face mask and place it onto the alien's nose
3. Monitor alien's nitrogen saturation on machines.
4. Nitrogen Saturation Machine will show GREEN in a stable state, if the machine turns RED everyone immediately hands off the alien and pump the crosscore once.
5. 4 lungs of the alien will begin to light up in a sequence. Pump the lungs according to the sequence it lights up in. (NOTE: If fail, pump both hearts to reset the lungs.)
6. Grab syringe 1 & 4 from the drawer, inject syringe 1 into the TOP heart and syringe 4 into the BOTTOM heart simultaneously.
7. Check if the above-mentioned signs have been rectified
8. Remove face mask and syringes

In case of Cardiac Arrest:

1. Instruct 1 nurse to push E-cart over to the alien
2. Attach ECG Leads to BOTH of alien's heart and begin to monitor alien's heart rhythm
3. Heart monitor will show GREEN in a stable state. If it turns RED, lungs will begin to light up in a sequence (similar to that of respiratory distress scenario). Pump lungs according to the sequence or until light turns GREEN again.
4. Instruct another nurse to insert IV into the BOTTOM RIGHT hand of the alien.
5. Press and hold the RIGHT light of the Ovario Flux until both lights on the Ovario Flux are lit up.
6. Grab syringe 3 and inject it into the stomach until it begins to vibrate
5. Remove needle and begin to pump crosscore until Ovario Lights both turn OFF.
6. When Ovario Flux lights are BOTH OFF, Both hearts will begin to light up.
7. Grab Syringe 1 and 2, inject 1 into the TOP heart and 2 into the BOTTOM heart simultaneously, both heart lights will turn OFF.
8. Check if above -mentioned signs are rectified.

IF DOCTOR SHOUTS
"ALIEN IS CRASHING"
TURN TO PG 9

Alien Anatomy available on pg 10.

Alien Crashing

When the alien is in a critical state, it enters a crash state where standard cardiac arrest procedures become ineffective. Alternate protocols are required for emergency intervention.

Protocols to follow:

1. At any moment moderator will give the command " Alien is crashing"

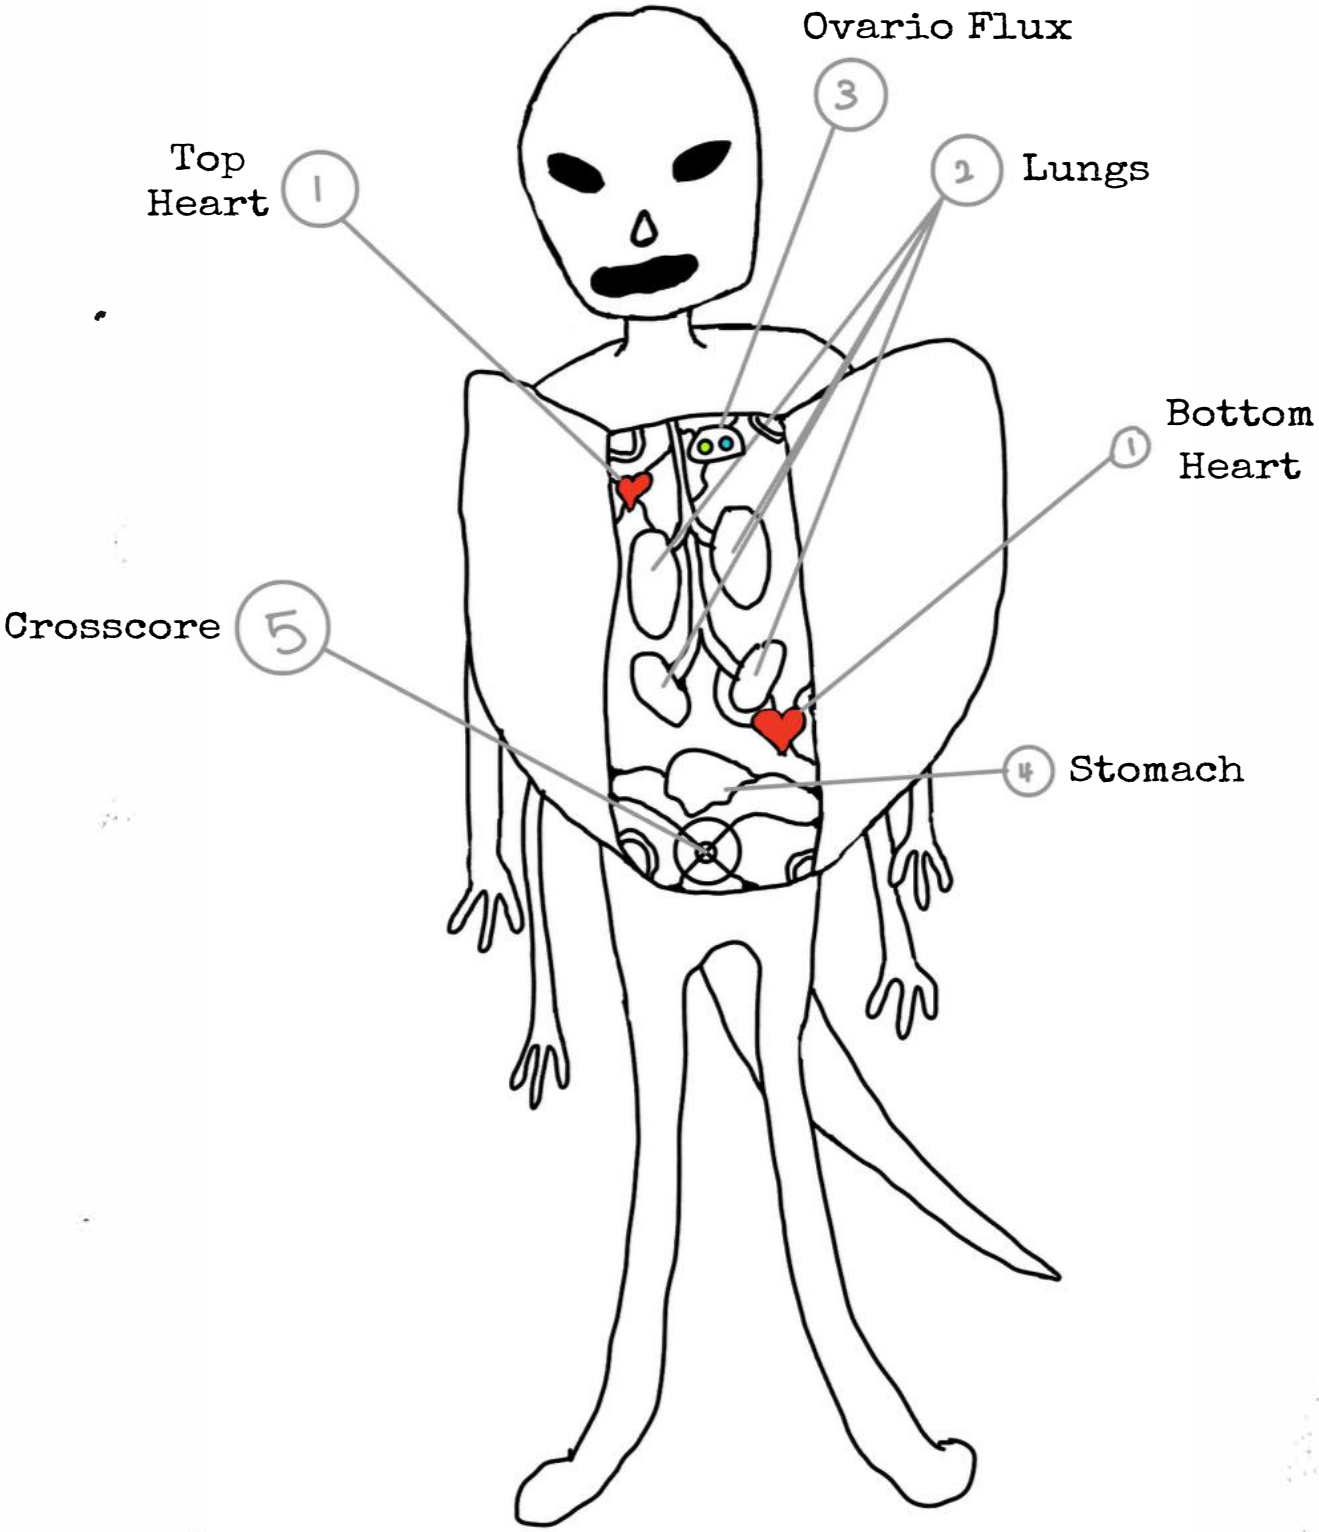
2. When command is said everyone has to take their HANDS OFF the alien IMMEDIATELY, alien's eyes will turn OFF

3. One nurse is to grab the defibrillator and place it onto the crosscore and begin normal defibrillator drills

4. Continue until the alien's eyes begin to glow red again.

Anatomy of Alien

Disclaimer: This drawing is specifically tailored for "AX-125". It is crucial to note that alien anatomy can vary significantly across different extraterrestrial entities. The information provided here is exclusive to AX-125 and should not be generalized to other unknown life forms.



DON'T LET THE ALIEN DIE

TOP SECRET - DO NOT DISTRIBUTE

DR MANUAL

Print pages 11 to 19 for the Doctor / Moderator

Beta Version

WARNING: This manual should only be used by the Doctor

This manual is to help the doctor perform their task ;
You are in command. You have the ability to customise this operation's difficulty for the nurses.

Don't forget to conduct debriefing sessions after each session

Doctor's Checklist

Teamname: **Date:**

Hospital: **Ward:**

A Penalty is indicated by a ✓ , each team starts out with 50 points.

Offence	Penalty	
Failure to use communication etiquette		20
Improper usage of communication etiquette		10
Improper usage of medical jargon / lingo		10
Incomplete / Failure to use SBAR		15
Incorrect procedure applied in alien treatment		10
Ran out of time		50

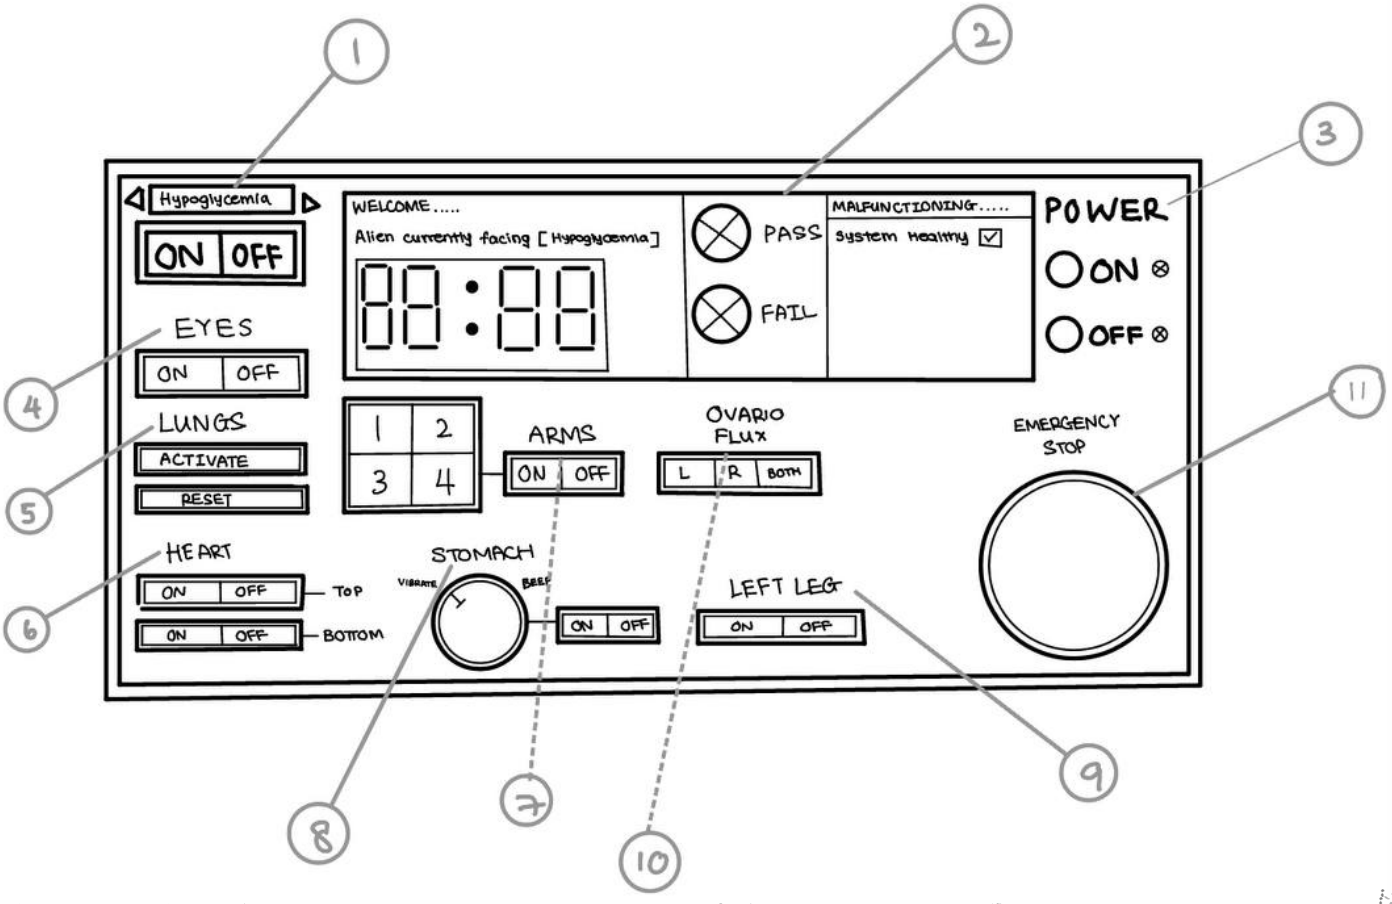
Remarks

Total score:

Alien Controller Manual

As the moderator, you have the ability to control the alien. This controller enables the moderator to display any symptom on the alien.

- You have the ability to show any symptom on the alien.
- Copy of Alien Anatomy is available on pg 15 for reference



1. Scenario Selector
Select from the various built in functions for different scenarios

2. Display Screen
Display shows which scenario the alien is currently undergoing along with allocated time limits, pass/fail lights as well as informs user of which parts are malfunctioning

3. Power Switch
Turns on and off the device

4. Manual Switch For Eyes
Allows moderator to turn on and off lights in the eyes if auto function fails to do so

5. Manual Switch For Lungs
Allows for manual activation and reset of light sequence for lungs.

6. Manual Switch For Hearts
Allows user to manually switch on and off both heart lights when necessary

7. Manual Switch For Arms
Numbers 1 to 4 symbolises the individual arms on the alien's body, select as many arms before turning on/off vibrations for arms

8. Manual Switch For Stomach
Numbers 1 to 4 symbolises the individual arms on the alien's body, select as many arms before turning on/off vibrations for arms

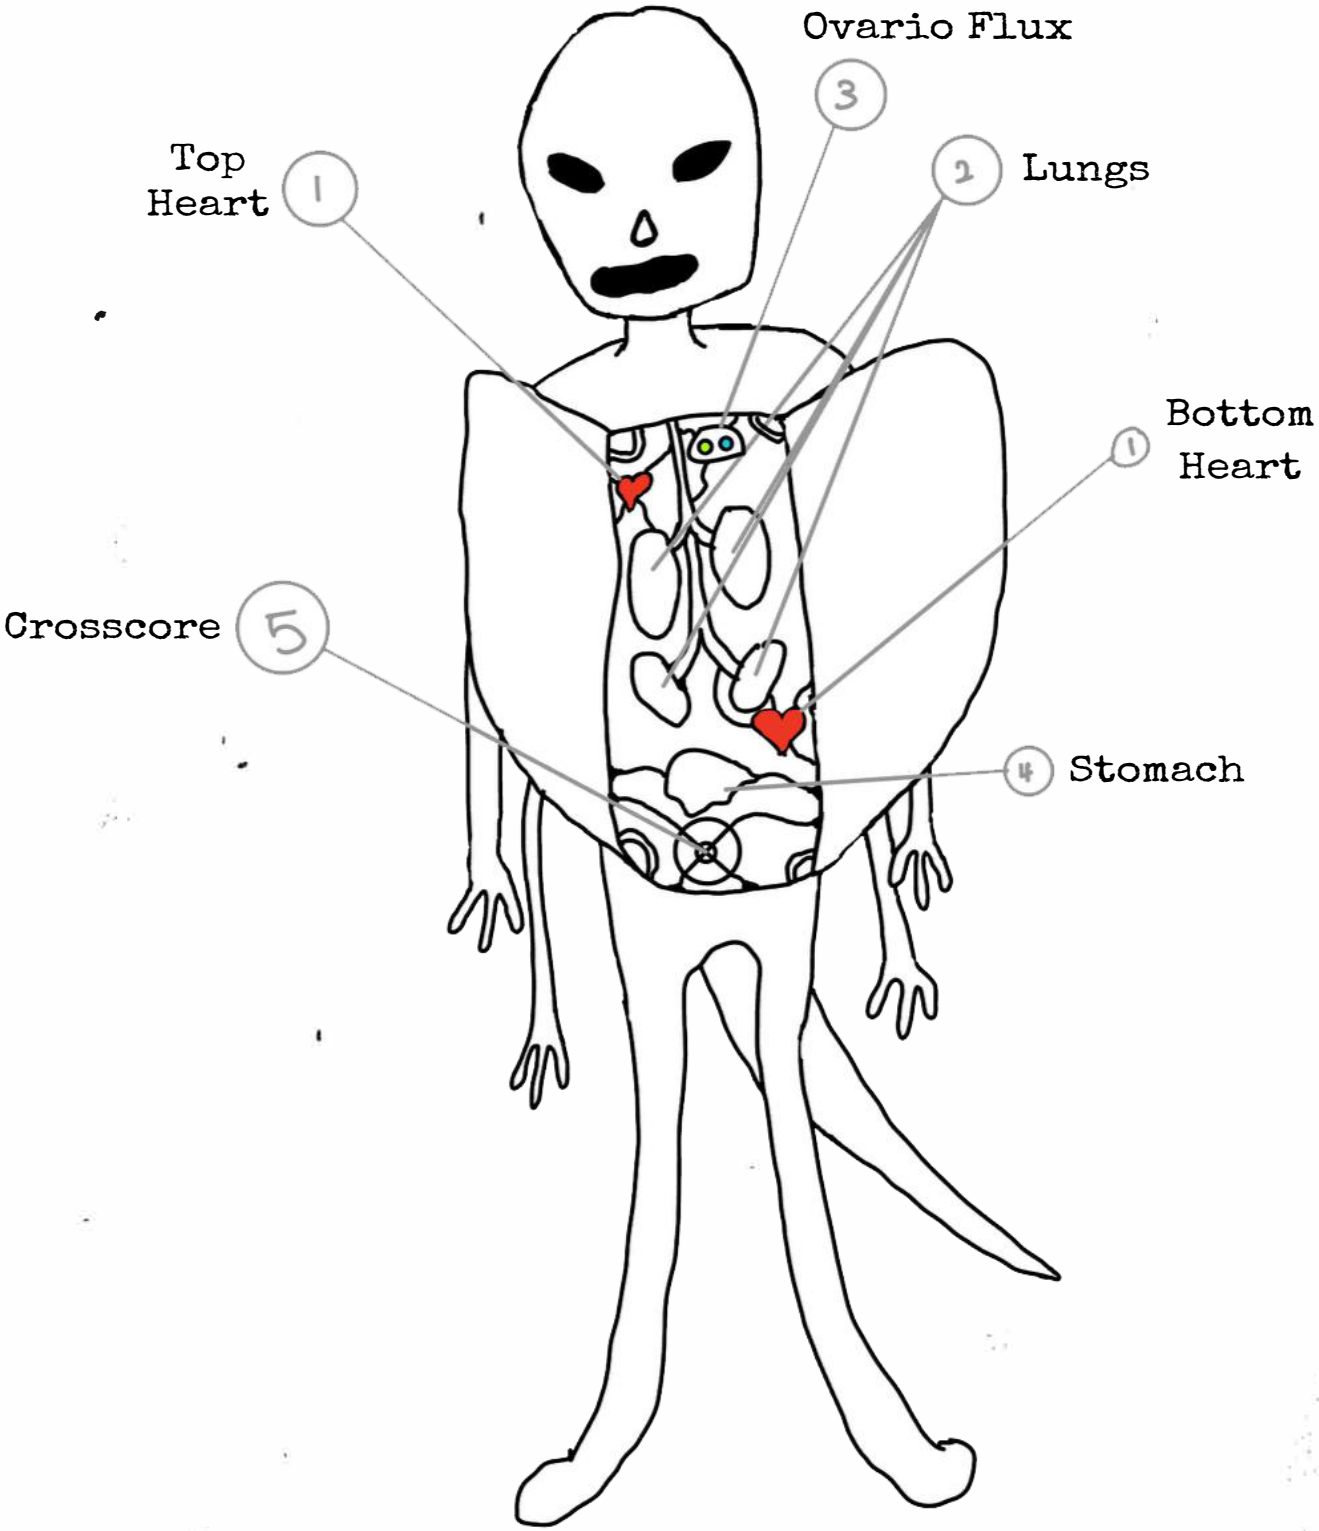
9. Manual Switch For left Leg
Turn on/off vibration for left leg only

10. Manual Switch For Ovario Flux
Turn on/off left, right or both lights

11. Emergency Stop
Turns off alien immediately

Anatomy of Alien

Disclaimer: This drawing is specifically tailored for "AX-125". It is crucial to note that alien anatomy can vary significantly across different extraterrestrial entities. The information provided here is exclusive to AX-125 and should not be generalized to other unknown life forms.



Simulating Alien Sickness

The game scenarios are inspired by real-life procedures, but adjustments are made for treating an alien, considering the unique circumstances.

- You can choose which symptoms to display for the simulation
- As the doctor, you can choose the difficulty for the nurses.

Symptoms to show for Hypoglycemia: (Easy)

1. Glow Alien's eye red
2. Light up Alien's LEFT Ovario Flux
3. Vibrate all 4 arms
4. Vibrate Alien's stomach

Symptoms to show for Respiratory Distress: (Medium)

1. Glow Alien's eye red
2. Light up Alien's RIGHT Ovario Flux
3. Vibrate Alien's TOP 2 arms
4. Vibrate Alien's stomach

Symptoms to show for Cardiac Arrest: (Hard)

1. Glow Alien's eye red
2. Light up Alien's LEFT Ovario Flux
3. Vibrate Alien's BOTTOM LEFT arm
4. BEEP Alien's Stomach

NOTE:
You have the flexibility to adjust the difficulty level of the game for the nurses according to your preference. Below are some suggestions to make the game easier or harder for the nurses

Suggestions for easy difficulty:
Call the NIC and inform that AX-125 is experiencing Hypoglycemia

Suggestions for hard difficulty:
Call the NIC and inform that the alien is unwell. Let the nurses determine the symptoms themselves

Alien Anatomy available on pg 15.

Providing Proper Alien Care

The game scenarios are inspired by real-life procedures, but adjustments are made for treating an alien, considering the unique circumstances.

- After simulating the alien's disease, the nurses have to provide the proper care for the alien
- For your reference, below are detailed guides on the steps needed to treat the alien.

How to check CBG Level:

- Pump LOWER heart 3 times till it lights up
- Raise the alien's LEFT leg up and hold it till it begins to vibrate
- Prick sole and measure CBG Level

If CBG reading < 3.9

1. Press and hold LIGHTED part of Ovario Flux till light turns OFF
2. Pump TOP heart 3 times until it lights up.
3. Check if above -mentioned signs are corrected.

If CBG reading < 2.8

1. Press and hold UNLIGHTED part of the Ovario Flux until light turns ON
2. When BOTH lights of Ovario Flux are on
3. Wait till BOTTOM heart light turns OFF
4. Hold both lights Ovario flux SIMULTANEOUSLY till both lights are OFF

In case of Respiratory Distress:

1. Place the alien in an upright position.
2. Grab nitrogen face mask and place it onto the alien's nose
3. Monitor alien's nitrogen saturation on machines.
4. Nitrogen Saturation Machine will show GREEN in a stable state, if the machine turns RED everyone immediately hands off the alien and pump the crosscore once.
5. 4 lungs of the alien will begin to light up in a sequence. Pump the lungs according to the sequence it lights up in. (NOTE: If fail, pump both hearts to reset the lungs.)
6. Grab syringe 1 & 4 from the drawer, inject syringe 1 into the TOP heart and syringe 4 into the BOTTOM heart simultaneously.
7. Check if the above-mentioned signs have been rectified
8. Remove face mask and syringes

In case of Cardiac Arrest:

1. Instruct 1 nurse to push E-cart over to the alien
2. Attach ECG Leads to BOTH of alien's heart and begin to monitor alien's heart rhythm
3. Heart monitor will show GREEN in a stable state. If it turns RED, lungs will begin to light up in a sequence (similar to that of respiratory distress scenario). Pump lungs according to the sequence or until light turns GREEN again.
4. Instruct another nurse to insert IV into the BOTTOM RIGHT hand of the alien.
5. Press and hold the RIGHT light of the Ovario Flux until both lights on the Ovario Flux are lit up.
6. Grab syringe 3 and inject it into the stomach until it begins to vibrate
5. Remove needle and begin to pump crosscore until Ovario Lights both turn OFF.
6. When Ovario Flux lights are BOTH OFF, Both hearts will begin to light up.
7. Grab Syringe 1 and 2, inject 1 into the TOP heart and 2 into the BOTTOM heart simultaneously, both heart lights will turn OFF.
8. Check if above -mentioned signs are rectified.

YOU CAN CHOOSE TO SHOUT

TURN TO PG 18 FOR INFO

Alien Anatomy available on pg 15.

Alien Crashing

When the alien is in a critical state, it enters a crash state where standard cardiac arrest procedures become ineffective. Alternate protocols are required for emergency intervention.

Protocols to follow:

1. At any moment you can give the command " Alien is crashing"

2. When command is said all nurses have to take their HANDS OFF the alien IMMEDIATELY, alien's eyes will turn OFF

3. One nurse is to grab the defibrillator and place them onto the crosscore and begin normal defibrillator drills

4. Continue until the alien's eyes begin to glow red again.

Communication

It is important to abide by these rules of communications, especially during emergencies. Clear communication ensures efficient coordination.

- This page showcases the different rules of communication and lingos / jargons that can be used by the nurses throughout the game

Communication Etiquette (compulsory to use)

Behind

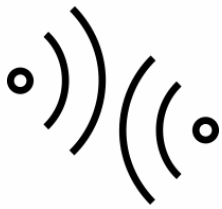
To be used when you are walking behind someone else while carrying a potential hazard.

Roger

To be used for acknowledging a statement directed to you

Break Break Break

To be used to signify an urgent interruption, to convey important information which requires any conversations to be halted for the time being



Echo back instruction

To be used whenever someone gives you an instruction to follow

S.B.A.R

Situation – A concise description of the alien's current situation or problem.

Background – Relevant information about the alien's background or medical history that is important to the current situation.

Assessment – Assessment of the patient's condition. Vitals, findings, etc.

Recommendation – Suggestions or recommendations for action based on the assessment.

Medical Abbreviations

STAT – Immediately

DNR – Do Not Resuscitate

NBM – Nil By Mouth

ECG – Electrocardiogram

GCS–Glasgow Coma Scale

SOB – Shortness of Breath

IM–Intramuscular

LOC –Level Of Consciousness

ICU – Intensive Care Unit

E-Cart –Emergency Cart

CPR– Cardiopulmonary Resuscitation – a lifesaving technique performed to maintain blood flow and oxygenation during cardiac arrest.

IV – Intravenous –a lifesaving technique performed to maintain blood flow and oxygenation during cardiac arrest.

Vitals–BP (Blood Pressure), SPO2 (Oxygen), RR(Respiration Rate), PR (Pulse Rate) and Pain Score
